

Progetto per Incrementare lo Sviluppo degli Interessi per le Discipline Scientifiche negli Studenti Liceali

Seminari in lingua inglese a carattere divulgativo dedicati allo sviluppo, negli studenti degli istituti secondari di II grado, di una maggior connessione tra lo studio delle materie scientifiche e la ricerca a livello universitario e post-universitario.

EVERYTHING YOU ALWAYS WANTED TO KNOW ABOUT ICEBERGS MELTING* (*BUT WERE AFRAID TO ASK)

Claudia Cenedese

Woods Hole Oceanographic Institution
MA, USA - <https://www.whoi.edu>

Iceberg calving accounts for half of the mass discharge from the Greenland and Antarctic ice sheets. Through their displacement and progressive melt, icebergs can impact both the regional and large-scale ocean circulation and marine ecosystems. Notwithstanding their importance, our understanding of where and how icebergs melt is limited and their representation in ocean and climate models is oversimplistic. As a result, model-based predictions of iceberg melt rates, of the fate of the meltwater, and of its impact on the ocean are highly uncertain. The focus of this lecture will be on laboratory experiments investigating the influence of the ambient flow, the icebergs' aspect ratio, the sediments within the iceberg and the Earth rotation on iceberg melting.

Martedì 27 maggio 2025, ore 18.00 - 19.00

CISM, Palazzo del Torso
Piazza G. Garibaldi 18, Udine
